

PrefLetter

There were two new issues in the past month, both investment-grade FixedResets, both issued in good size. These issues represent welcome additions to the Canadian preferred share universe.

PerpetualDiscounts now yield 5.31%, equivalent to 6.90% interest at the now standard 1.3x conversion factor, while long corporate yields have performed very well over the month and now stand at about 4.75%. Hence, the pre-tax interest-equivalent spread (also called the Seniority Spread) has widened to about 215bp from 195bp last month, reversing last month's change. It should be noted that this figure is not directly comparable to long term historical data due to the change in equivalency factor and the mass migration of highly rated issues to DeemedRetractibles. Be that as it may, the long-term history of this spread is shown in Chart 1, while the other spreads of interest are shown in Chart 2. Note that:

- The Seniority Spread is Interest-Equivalent PerpetualDiscounts less Long Corporates
- The Credit Spread is Long Corporates less Long Canadas
- The Term Spread is Long Canadas less 5-Year Canadas

See the October, 2009, edition for more discussion of these spreads. The equivalency factor has been changed to 1.3x as of February 4, the same day as the DeemedRetractable migration.

Malachite Aggressive Preferred Fund reported returns at link #1, some tables are reproduced at the end of this newsletter. The fund is available either directly from Hymas Investment Management (see link #2) or through brokerage accounts held at Odium Brown (see <https://www.odumbrown.com/home.html>).

DBRS downgraded RON.PR.A to Pfd-3(low).

TDS.PR.C has issued a partial call for redemption.

CZP.PR.A and CZP.PR.B are now effectively direct issues of Atlantic Power (ATP) following the closing of the takeover proposed last June. Their legal structure has not changed, but the both the company and its parent are now guaranteeing ATP's senior debt, in a move reminiscent of the proposed BCE/Teachers' deal in 2007. There is therefore no advantage to CZP in "being closer to the money" that would normally be the case in a holdco/opco structure. DBRS has announced that they expected to downgrade the issue from Pfd-3 to Pfd-4 on consummation of the deal, but have not yet made a formal announcement. DBRS does not rate ATP, but S&P rates it as BB- and it would appear the market agrees since ATP's recent seven-year bond issue was sold to yield 9.5% – so I expect sizable downgrades from both Credit Rating Agencies to be announced shortly.

Both issues plunged after the DBRS announcement; it is instructive to examine the yield spread between CZP.PR.A (a PerpetualDiscount) and BBD.PR.C (also a PerpetualDiscount) shown in Chart 3. As may be seen, the two issues traded even-yield at the beginning of the

DeemedRet	+1.16%	N/A

year, notwithstanding the perceived higher credit quality of CZP.PR.A; there was a widening at the time of the announcement followed by a recovery; and a dramatic widening following the DBRS announcement. As BBD is rated Pfd-4 by DBRS, one would expect the issues to trade currently at more-or-less even yield; but BBD has much better name-recognition amongst Canadian retail investors, so the relative wideness may well persist.

Last month I reported that S&P had downgraded CM.PR.D and CM.PR.E to BBB+ on the bond scale due to their newly acquired status as NVCC issues (this also applies to CM.PR.G, which is not rated by S&P) and noted that it had had no effect on the Canadian preferred scale of credit ratings. S&P has now announced that a downgrade on the preferred scale rating to P-2(high) has actually become effective, but they forgot to announce it.

S&P has assigned a positive outlook to Fairfax Financial Holdings; they currently rate FFH.PR.C, FFH.PR.E, FFH.PR.G and FFH.PR.I (all FixedResets) at P-3.

Moody's has placed SLF on review-negative, following SLF's announcement of a large charge against earnings in 11Q3 and a further charge expected in 11Q4, citing weaker financial flexibility and increased capital required to support its US operations. DBRS also expressed concern regarding reduced flexibility, but took no action.

Brookfield announced that the net result of the recent conversion privilege to and from BAM.PR.E (RatchetRate) and BAM.PR.G (FixedFloater) was a small net migration towards the latter issue.
